<p>Unik</p> 	<p>Great audio performance from a compact and shallow enclosure, ideal for use discreetly mounted on walls.</p> <ul style="list-style-type: none"> • 2-way on-wall or free-standing speaker with bass reflex port • Paintable grille • Flame retardant, UV stable composite cabinet • Sold individually 	<p>216</p>

Technology

Space Optimisation

Space Optimisation uses sophisticated acoustic modelling to build up a complete picture of how the speakers, their placement, and the unique characteristics of a room interact to affect the sound heard. It then precisely identifies frequencies that are artificially distorted by the environment, and reduces their energy, to reveal the music that would otherwise be hidden.

All Linn systems have Space Optimisation built in, and it's a free software upgrade to all Linn DS owners.

Exakt

Exakt technology preserves the natural sound of every instrument by synchronising the elements that make up every note, including all the harmonics.

Available through the addition of a Linn integrated speaker or Exaktbox to your system, it uses Exakt Link to connect to your Linn DS or DSM player. All current Klimax, Akurate and Majik models have Exakt Link connections on-board, ready for the ultimate system upgrade.

Katalyst

Katalyst takes an unprecedented level of control over the critical elements that lie at the heart of the analogue signal's creation; offering improved Data Optimisation, superior Master Clock, independent Power Supplies, a new ultra-low distortion Output Driver and crucially, for the first time, a high-stability input Reference Level.

The latter is vitally important because, at the point of creation, the analogue audio signal is particularly vulnerable even to minuscule variations in the Reference Level, which cause irreversible damage.

Katalyst's high-stability input Reference Level eliminates variations during analogue signal creation, giving a deeper insight into the music being played.
